Sea level rise Wikipedia The three main reasons warming causes global sea level to rise are oceans expand, ice sheets lose ice faster than it forms from snowfall and glaciers at higher altitudes also melt. Sea level rise since the start of the 20th century has been dominated by retreat of glaciers and expansion of the ocean but the contributions of the two large ice sheets, Greenland and Antarctica are expected to... Why would sea level rise for global warming and polar ice Two major causes of global sea level rise such as thermal expansion of the oceans and the loss of land-based ice for increased melting have been claimed by some researchers and recognized by the IPCC. The big Arctic Sea Ice shift of 2007 Ice refuses to melt by Javier I have maintained since 2015 that in the 2006-2007 season the Arctic underwent a cyclical phase shift and the rapid sea ice melting observed over the previous decades ended. A few scientists predicted or explained this shift based on their study of multi-decadal oscillations see bibliography. They were ignored by mainstream climatology...
