PDF Bioactive Applications for Electrospun Fibers Bioactive Applications for Electrospun Fibers Article PDF Available in Polymer Reviews 56(4) 631-667 · January 2016 with 365 Reads DOI: 10.1080/15583724.2015.1136641 BIOACTIVE CERAMIC POLYMER COMPOSITES FOR TISSUE REPLACEMENT Bioactive ceramic polymer composites for tissue replacement 87 now The interest in one particular group member hydroxyapatite (HA) arises from its similarity to bone apatite, a biological apatite, the major component of the inorganic phase of bone which plays a key role in the calcification and resorption processes of bone. Encapsulation of Bioactive Compound in Electrospun Fibers Encapsulation of Bioactive Compound in Electrospun Fibers and Its polymer fibers 24 A typical electrospinning system consists of a high voltage power supply, a syringe pump with a metal needle, bioactive molecules, and hydrophobic polymers or the hydrophobic bioactive molecules into hydrophilic polymers. Journal of Bioactive and In vitro degradation and in vivo 138 Journal of Bioactive and Compatible Polymers 29(2) Keywords: Tissue engineering, chitosan scaffold, biodegradation, biocompatibility, subcutaneous implantation. Introduction Many biodegradable polymers have been proposed to produce scaffolds in tissue engineering. Marine bioactive fibers: alginate and chitosan fibers, a respectively to precipitate the two polymers into fibers 7(2) Upon washing, stretching, and drying, alginate and chitosan fibers can be made with tensile properties similar to conventional viscose fibers. Marine bioactive fibers: alginate and chitosan fibers, a critical review 230 copyright 2011 in et al
